

Lower Risk with a Secure, Hosted Implementation

For companies looking to reduce infrastructure cost, implementation time and internal IT resource requirements, MCA's Software-as-a-Service (SaaS) deployment model has become an increasingly popular implementation choice.

The MCA OnDemand Edition allows the award-winning MCA Solution Suite to be managed and hosted in a secure, high availability data center, giving service planners access to their planning installation via the Internet with minimal customer IT support of the database or application software.

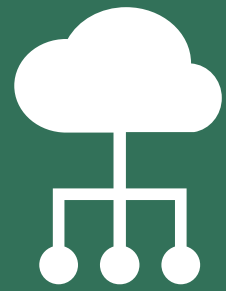

The OnDemand Advantage

MCA's OnDemand Edition represents an ideal "best of both worlds" solution for many clients, combining ownership benefits – such as customization flexibility, performance, and security – with outsourcing benefits, like lower administrative and support costs. **With MCA OnDemand Edition, organizations can take advantage of:**

Reduced Implementation Timeframes: SaaS deployments require little-to-no setup and minimal configuration – meaning implementations can be live within 30 days of data receipt.

Decreased Ownership Costs: The SaaS model requires little in terms of infrastructure components beyond an Internet connection, and because services are provided by MCA on-demand, the organization's internal IT costs are significantly reduced.

Maximized Returns on Technology Investments: By leveraging pre-configured implementation templates developed in line with industry best practices, organizations can rely on MCA's vast deployment experience and managed services to increase uptime, add value and lower implementation and financial risk.

MCA ENTERPRISE EDITION

MCA DESKTOP EDITION

Delivering Service that Rises Above

MCA OnDemand Edition implementation helped Tellabs dramatically reduce its spare parts inventory by more than 60%. Now companies of any size can leverage MCA's award-winning software functionality in a hosted, lower cost, on-demand environment.

“ Software-as-a-Service (SaaS) can provide cost savings and accelerated implementation cycles. ”

– Robert P. Desisto | Gartner

MCA OnDemand Makes Execution Easy

With mounting pressure to reduce the implementation risks and complexity of behind-the-firewall enterprise projects, it comes as no surprise that more companies are considering SaaS. Such solutions require little in terms of infrastructure commitments beyond an Internet connection and, as opposed to customer-managed solutions, SaaS allows companies to shift IT resources away from application maintenance and onto other vital projects.

In response to the growing demand for software managed services, MCA is now offering on-demand delivery of the industry-leading MCA Solution Suite. A monthly subscription fee allows organizations to access the solution and related services over the Internet, leveraging robust features and functionality without administrative headaches or excessive hardware costs.

Other advantages of the MCA OnDemand model over traditional software implementation methods include:

Lower Up-Front Cost

Because software is not purchased and services are provided on-demand, costs are spread out and can be budgeted accordingly, and internal IT costs are significantly reduced.

Rapid Fixed Price Deployment

SaaS applications require little-to-no set up and only minimal configuration, and with MCA OnDemand deployment, organizations can be live within 30 days of receipt of data.

Pre-configured Industry Best Practice Templates

OnDemand users can leverage MCA's pre-configured industry best practice templates to lower implementation time with the knowledge gained from industry leaders.

Automatic Upgrades

Upgrades are automatically installed, allowing end users to focus on planning and deliver more targeted customer support.

Greater Customer Satisfaction

MCA is responsive to customer needs to maintain high levels of customer satisfaction.

Managed Services in High Uptime Environment

Managed services include IT services, such as management of systems and upgrades, as well as Planning Careto support your team in business analysis, network design and other critical tasks that leverage the software implementation. The system is managed in a secure, 24x7 high uptime data center.

MCA OnDemand Edition Features:

- Setup and configuration with guaranteed rapid implementation.
- User access to the customer specific installation of the MCA Solutions Suite.
- End-user customer support.
- Database maintenance and automatic server software upgrades.
- Hosting of the system in secure, 24/7 data center.
- Daily backups and full redundancy.
- Planning Care Services and training to assist your team.
